

BUILDING ENCLOSURE DIAGNOSTICS

PINPOINTING PROBLEMS, PROVIDING SOLUTIONS

SOLVE BUILDING ENVELOPE ISSUES WITH DYNACO TESTING'S DIAGNOSTIC SERVICES

Leaks, drafts, and other performance issues in your building can quickly escalate into costly repairs and operational disruptions if left unresolved. At Dynaco Testing, we specialize in Building Enclosure Diagnostic Services, using advanced testing methods to pinpoint the root cause of your building's issues. Whether it's a persistent leak, unexplained water damage, or air infiltration, our team identifies the problem with precision and provides solutions to restore your building's performance.

WHAT IS BUILDING ENCLOSURE DIAGNOSTIC TESTING?

Building enclosure diagnostic testing is a targeted service designed to uncover vulnerabilities in your building's roof, walls, windows, or seals. When your building is experiencing a leak or performance issue, we use cutting-edge tools like water infiltration testing, Precision Leak Detection roof scans, air leakage testing, and infrared thermography to locate the exact source of the problem. These techniques ensure that no guesswork is involved, allowing us to diagnose issues accurately and effectively.

WHY IS DIAGNOSTIC TESTING IMPORTANT?

If your building has persistent leaks, drafts, or other issues that seem impossible to locate or resolve, diagnostic testing is the solution you need. Undetected water intrusion can lead to structural damage, mold growth, and escalating repair costs, while air leaks can drive up energy bills and create uncomfortable indoor conditions. Our targeted testing methods are designed to uncover the exact source of these problems, even when traditional repairs have failed. By addressing the root cause, diagnostic testing ensures effective solutions, protects your building from further damage, and restores its performance and reliability.

Why Choose Dynaco Testing?

When your building has a problem, you need experts who can find the cause quickly and accurately. At Dynaco Testing, we bring industry-leading expertise and advanced technology to diagnose and resolve building envelope issues. Our client-focused approach ensures that we understand your concerns and deliver actionable solutions that restore your building's performance.
